APP Interface

Little Cloud

Pregnancy Loss Companion

The Little Cloud Companion App is designed specifically for women experiencing pregnancy loss. This app brings together psychologists, physicians, and nutrition experts as consultants, integrating current resources in pregnancy and maternal health to provide personalized interactive support.

Group Project: 3 Members

Research

Taking the time to understand the brief through intensive research.

Interviews

Through interviews and discussion sessions, we gain a better understanding of the experiences of pregnancy loss.

Users Analysis

Prototyping

Sketched initial app layouts by hand and created interactive prototypes using Figma.

User Testing

Recorded screen interactions, and analyzed feedback to enhance the APP design.

User Interface Screens

The app is designed based on user habits and color psychology.
Integrated AR interaction with a personalized emotional visualization system

Interface and AR Function

Commercial Presentations

Explored subscription-based & B2B mental health partnerships, planning collaborations with maternal healthcare institutions for broader adoption.

Pregnancy Loss

is not only a physical event —

Pregnancy loss has
**long-lasting
emotional effects**

Healthcare focuses
mainly on physical recovery but
lack of long-term emotional support

Social taboos
prevent women from
speaking up or seeking help

BUT...

Lack of
emotional safety and privacy

Excludes non-conceiving

Lack of cultural sensitivity
& visual empathy

Woman experiencing
pregnancy loss
(n=13)

**1.5-hour in-depth interviews
(one-on-one)**

“I hid my miscarriage from my family to avoid intrusive questions but often cried alone at night.”

Due to cultural taboos, many suppress emotions and pretend to be fine.
They need a private, non-judgmental emotional space.

Public
(n=33)

Public group discussions

"Maybe she didn't take good care of herself,
like staying up too late, being too stressed, drinking coffee, or wearing high heels?"

Widespread social misconceptions and victim-blaming.
Users need accurate, compassionate information.

Professionals
(n=9)

(2 nurses, 2 psychologists, 2 nutritionists, 1 physician, and 2 miscarriage support organizations.)

1.5-hour in-depth interviews

“I once suggested a patient visit a temple because I didn’t know what else to say...”

“The body heals on schedule. But the emotional part? It doesn’t follow a timeline.”

Current care is fragmented and short-term.
Users need gentle, sustained emotional guidance.

Not just lack of resources —
but of a

- ✓ Emotionally safe
- ✓ Sustainable

support system

Design Guidelines	3 Key Modules of Design
How might we create a safe space for self-care?	Emotional Support Space avatar + moon diary
How might we gently correct misconceptions?	Integrated Care Platform recovery calendar + articles
How might we design a paced and structured journey of recovery?	30-Day Healing Journey daily AR plant-watering

Emotional Support Space

A “Little Cloud” Avatar for Daily Comfort

Moon-phase Diary for Emotional Release

Integrated Care Platform

Personalized Recovery Calendar

Let us understand you better,
tailoring the companionship just for you.

Emotional Growth

30-Day Healing Journey

Watering the Plants
as
Emotional Growth

Phase	Purpose & Method	Key Insights & Design Iterations
Phase 1 Figma Prototype Test	• Test interaction flow and emotional resonanc • 11 women with prior pregnancy loss • Prototype walkthrough + semi-structured interviews	• The name “Little Soul” was emotionally triggering → renamed to “Little Cloud” • Static animation lacked connection → replaced with AR plant interactions to support everyday engagement
Phase 2 30-Day Line Scenario	• Understand emotional engagement in everyday routines • Empathetic, non-acute users • 30-day scenario test via LINE bot	• Warm pink tones enhanced emotional safety • AR “Planet Garden” served as a metaphor for growth • Segmented chat rooms reduced emotional pressure and encouraged gentle communication

Phase 1: Figma Interactive Prototype

- Purpose: Test interaction flow and emotional resonance
- Participants: 11 women with past pregnancy loss
- Method: Prototype walkthrough + semi-structured interviews

Result 1: renamed to “Little Cloud”

“The term “Little Soul”
evoked my sad memories and discomfort.”

Result 2: change to AR Plants

“The plant is adorable!
but I want it to feel more connected to my real life.”

Phase 2: 30-Day Line Scenario Test

- Purpose: Understand emotional engagement in real-life routines
- Participants: Empathetic, non-acute users with prior loss

Result 1: Softened visuals

"Warm colors can bring a sense of safety and calm."

Result 2: Natural Sounds

"Natural sounds can help create a calming environment, supporting emotional healing."

Result 3:

Segmented Chat Rooms

"Those going through a miscarriage may need space to grieve and heal, while individuals trying to conceive may be focused on hope and preparation."

Not Just a Tool, But a Companion: Rethinking Digital Support for Pregnancy Loss

Emotional Insight

What users truly need is not functional efficiency, but **emotional presence** —
a space that allows them to heal at their own pace.

Vision

Healing doesn't start at the moment of loss — it starts when grief is finally allowed.
Little Cloud is always there, ready when the user is ready.
