Enhancing the sense of self-connection.

Confronting one's feelings of loss.

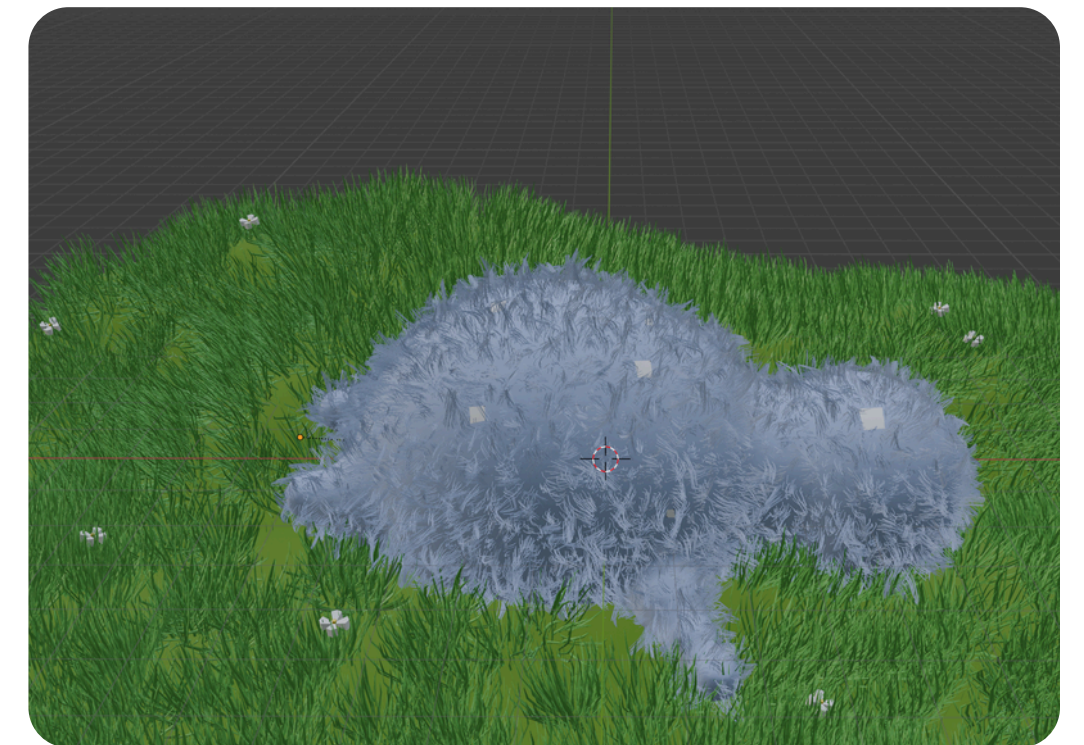

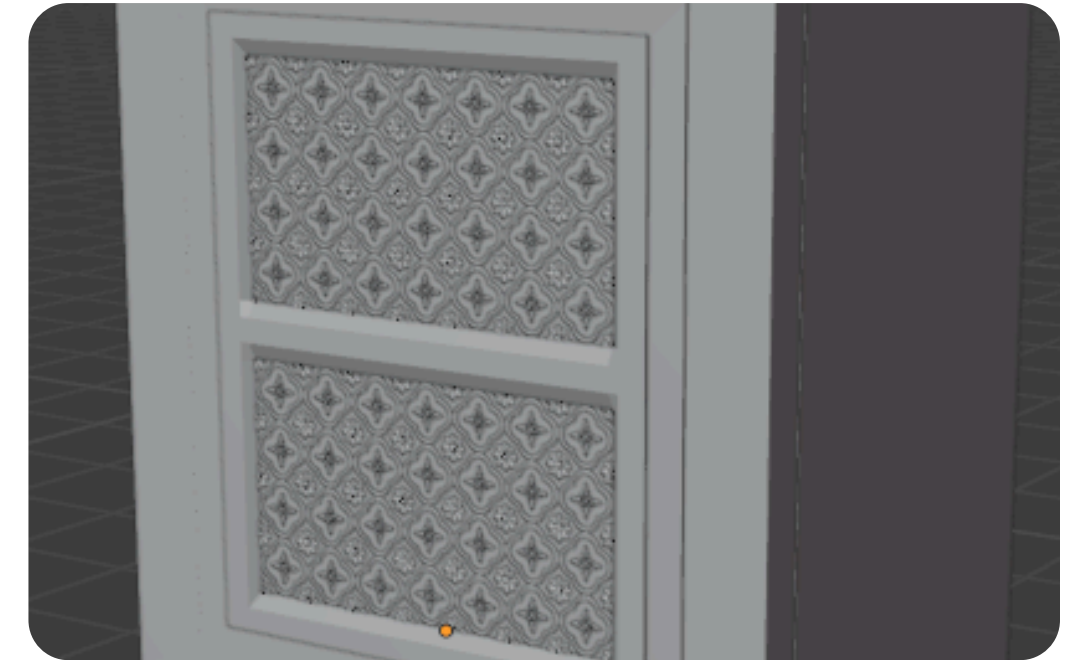

Transforming emotions into tangible interactions.

3D Modeling

Taiwanese cultural elements and emotion-based 3D models.

3D Modeling

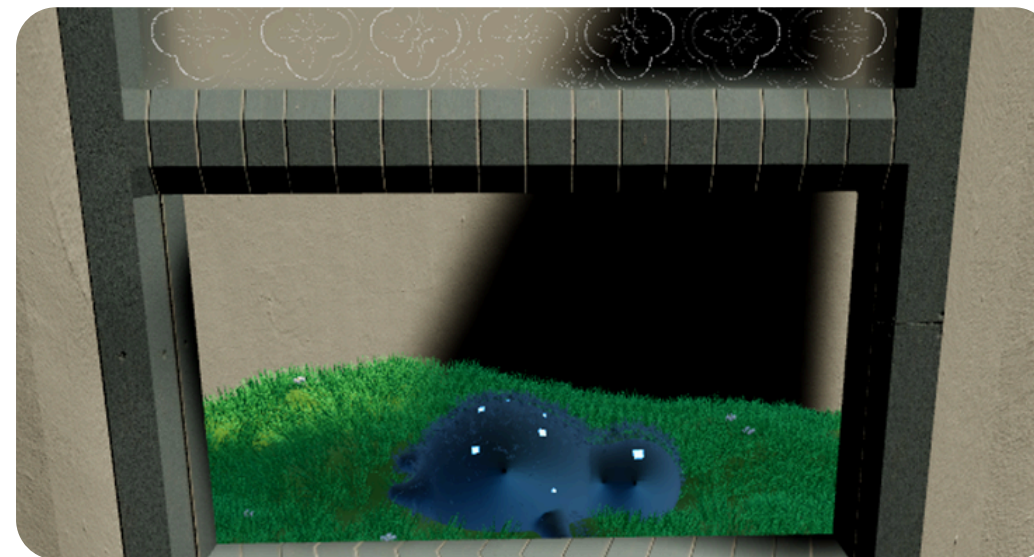

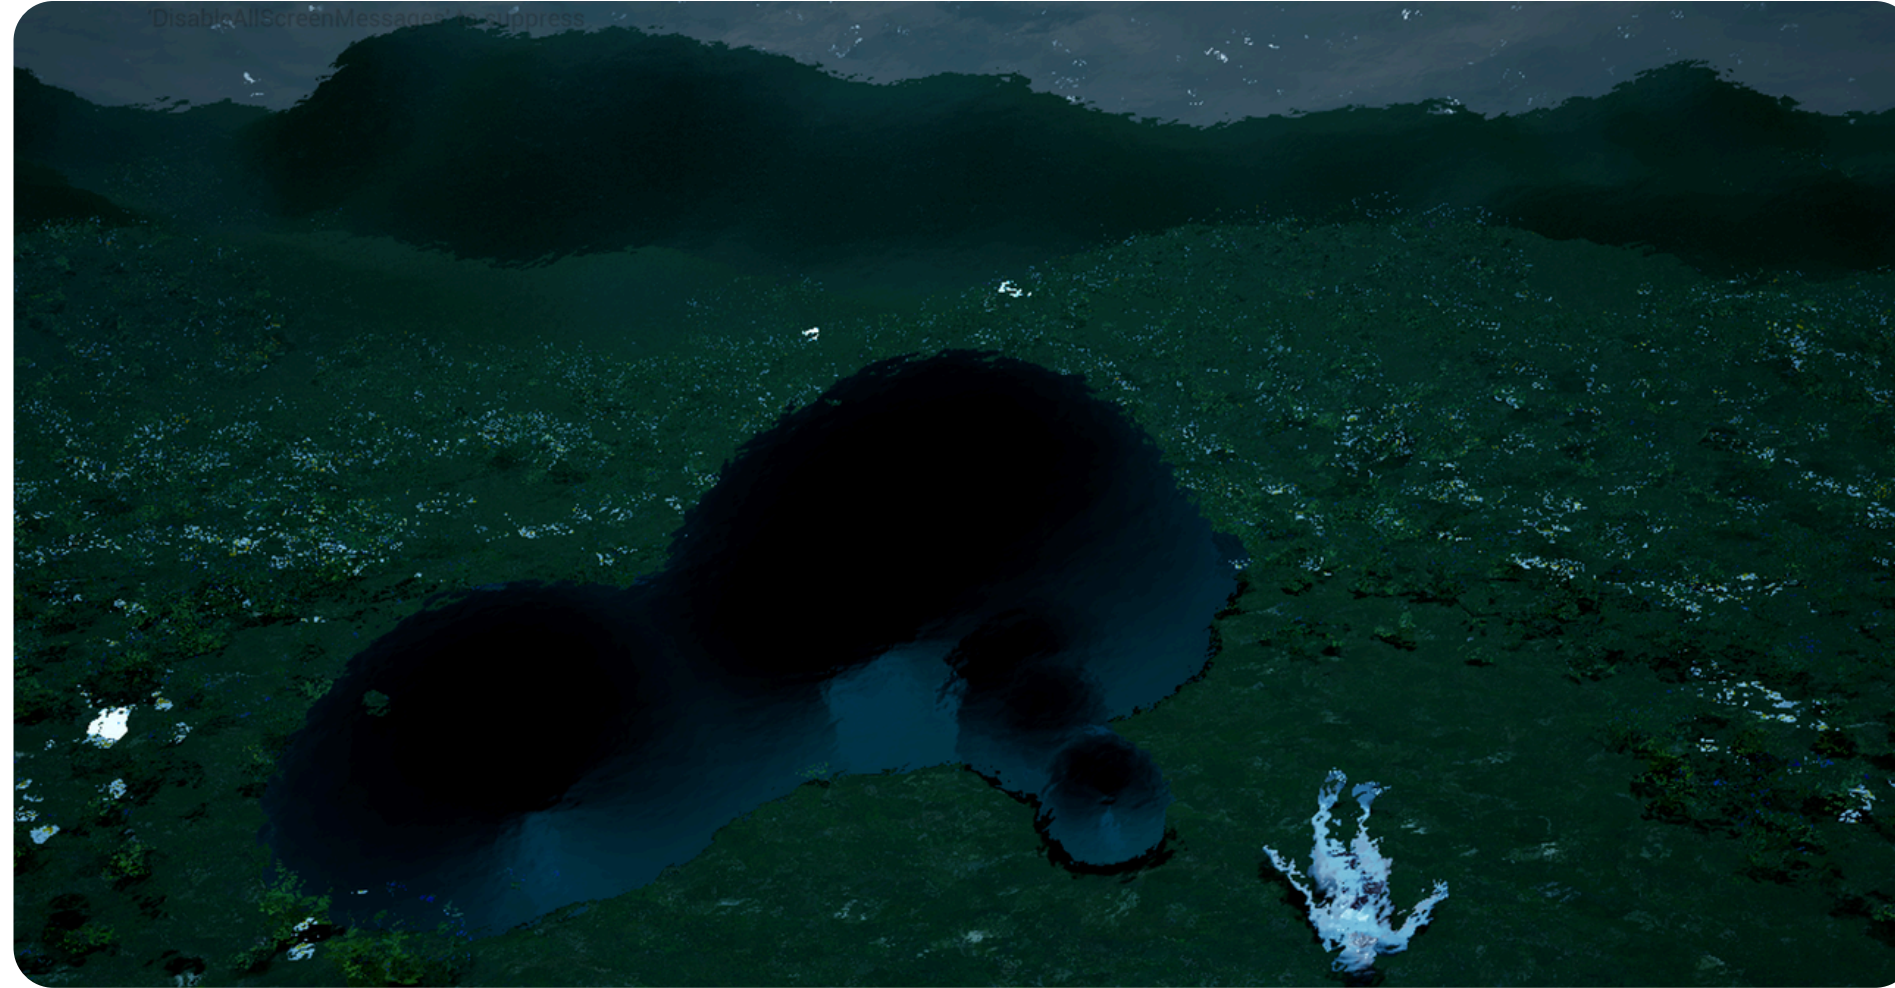

Emotional Interaction

An AI NPC guides users through grief stages via dialogue and mixed reality transitions.

Technical Solution

Users express emotions through conversations and object interactions, fostering deeper self-reflection.

BabyBump

How can we gamify the healing process to better aid the miscarriage struggling survivors ?

 Individual work

Background

The project stems from the "Little Cloud Pregnancy Loss Digital Companion Service," blending case studies and personal experiences to explore emotional healing through XR.

Problem

Women facing pregnancy loss experience emotional isolation and societal pressure, with limited access to supportive, stress-free spaces.

Solution

Using XR, the project creates an immersive space to support emotional release and foster societal empathy.

BACKGROUND

Base on Little Cloud project

This project addresses Taiwan’s insufficient support for postpartum and miscarried women, combining digital solutions with medical and nonprofit collaborations to fill gaps in psychological care and social support.

Psychological Support

Pregnancy Loss Care

APP

Project deliverable

A digital platform integrating AR and gamification offers psychological counseling, nutritional guidance, and community support, enhancing maternal mental health and quality of life with innovative and impactful solutions.

EXPERIENCE PROCESS

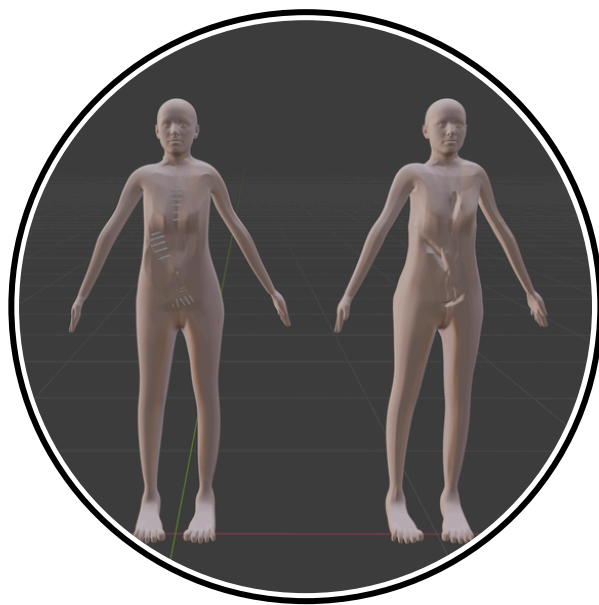

Attempting to Understand

Process

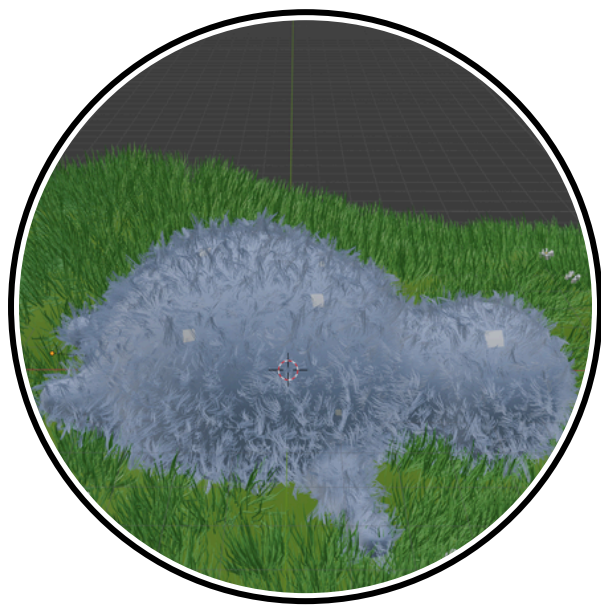

I am a part

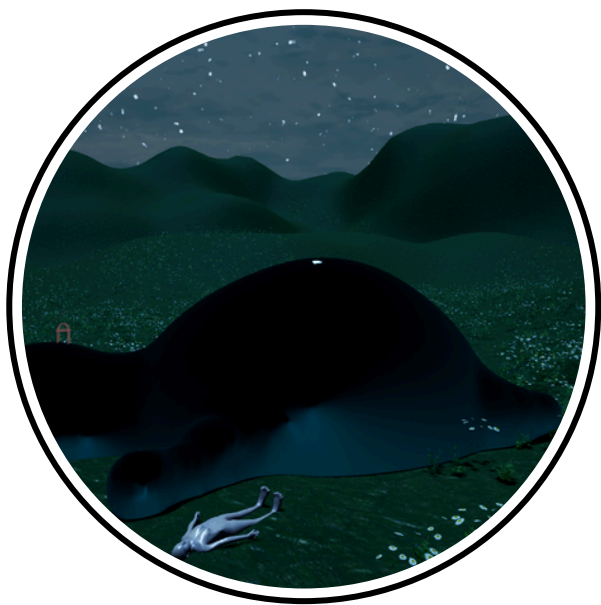

From peeking through the window on the wall.

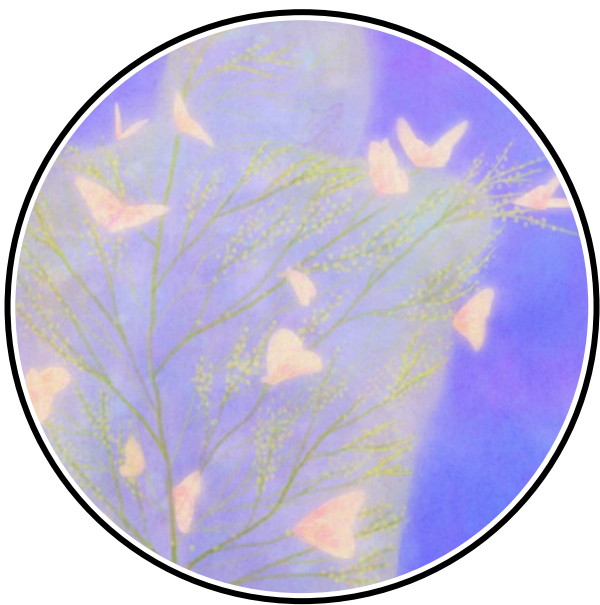

Approaching the bulging abdomen to the flattened body.

Aligning body posture with body weight. The body is crushed by a massive shape.

Attempting to interact with the shape.

Realizing the shape is small and coexists with me. My body becomes a pearl, a sprout, a faint light.
